PACKING&SHIPPING

PACKAGING DETAILS

Customized packing: We accept customized package, with your logo or brand printed on your label and box.

Export packing: We use export carton with shipping marks for the protection of the long way shipping.

Isuzu differential parts is composed of planetary gear, planetary gear frame, half shaft gear and housing. Differential housing plays the role of support and connection, so it requires high strength and plasticity. Therefore, cast iron is chosen. Considering the process and economy of cast iron materials,

ductile iron, which is widely used at present, is selected. The power of the engine enters the differential through the drive shaft, and directly drives the planetary track wheel frame. Then the planetary wheel drives the left and right half shafts, driving the left and right wheels respectively, so as to ensure the pure rolling movement of the driving wheels on both sides.
