1-12235035-0 Connecting rod screws for ISUZU 700P/4HK1/4HF1 models, which can firmly connect the connecting rods to ensure that all components work together when the engine is running, and withstand huge impact and tension. In high-speed driving and frequent starting and stopping, it effectively prevents the connecting rod from loosening, maintains stable engine performance, reduces wear and tear, and reduces the risk of failure, which is a key component to ensure the vehicle's power output and driving safety.
