8-97174588-0 Valve rocker arm shaft assembly for ISUZU 700P 4HK1. It converts the rotary motion of the camshaft into reciprocating motion of the valves, enabling them to open and close precisely. For example, during engine operation, the valve rocker shaft assembly distributes the force evenly, ensuring that each valve moves in unison. This product helps to improve the engine's combustion efficiency, reduce fuel consumption and emissions, and make the vehicle's power output smoother and more reliable.
