8-98095980-0 Diesel Compartment Assembly (Coarse Filter) Iron For ISUZU 700P NQR LT134 4HK1 models. It is mainly responsible for the initial filtration of larger impurities in the diesel fuel, such as rust, sand and gravel. By intercepting these contaminants in advance, it reduces the pressure on the subsequent fine filtration and protects the engine's injection system from wear and clogging. Like a front line of defence, it provides relatively clean diesel fuel for the engine, ensuring its stable and efficient operation and prolonging the service life of key vehicle components.
