8-97306217-0 The brake fluid reservoir plays a vital role in the ISUZU 700P/4HK1. It is a key component of the brake system and is responsible for storing and supplying brake fluid. A steady

supply of oil pressure ensures that brake pedal operation is transmitted to the brake components accurately and efficiently for fast, smooth brake response. During emergency braking, it provides reliable braking force for the vehicle to ensure driving safety. For example, it can quickly brake to avoid collision in unexpected road conditions, or continue to stabilize braking during long downhill slopes, making driving more secure.
