8-97409996-0 Shifter Dust Cover Connecting Cover, built for ISUZU 700P/NPR6SN models. It prevents dust and debris from entering the gearshift lever area and ensures smooth shifting. It protects the internal parts from wear and prolongs service life. Made of high quality materials and easy to install, it is an indispensable and practical accessory for this model.

Installation Steps:

1. Prepare tools and materials: make sure you have purchased the right dust cover for your model and have the required tools such as screwdrivers, wrenches, etc. ready.
2. Remove the old dust cover: Depending on the model, you may need to remove some parts such as the shifter head, center console panel, etc. to be able to install the new dust cover. Use a screwdriver or wrench to remove the old dust cover and remove it from the vehicle.
3. CLEANING THE MOUNTING AREA: Before installing the new dust cover, the mounting area needs to be cleaned to ensure that the dust cover will fit securely on the vehicle. Use a cleaner or damp cloth to clean the mounting area and make sure it is dry.
Installing the New Dust Cover: Place the new dust cover over the mounting area and make sure it matches the appearance and dimensions of the vehicle. Use a screwdriver or wrench to attach the dust cover to the vehicle and make sure it is secure.
4. INSTALL OTHER PARTS: If other parts were removed during the installation of the dust cover, such as the shifter header, center console panel, etc., these parts will need to be reinstalled on the vehicle. Make sure these parts are securely installed and fit the dust cover.
