| Packaging | Nylon Bag/Neutral/Customized for customer needs |
| Shipment | By Sea/ Air/ Express |
| Deliver Date | 10-15days After receiving the deposit |
| Price | Negotiable |

Oil Pump function:

The primary function of the oil pump is to draw oil from the oil pan and pump it through the engine's lubrication system. It ensures a continuous and pressurized flow of oil to all the moving parts of the engine, such as the crankshaft, camshaft, pistons, and bearings. This circulation is essential for maintaining proper lubrication and reducing friction between metal surfaces, thereby preventing excessive wear and tear.
