How we pack the cab shell?

- 1.The use of cushioning materials such as foam, sponge, bubble pads, etc. can effectively absorb the impact of the transportation process
- 2.Depending on the material and weight of the cab shell, select a fastening material such as steel straps, ropes or nylon straps with sufficient strength.
- 3.The cushioning material is uniformly filled in the gaps inside and around the cab shell to ensure that the shell is completely encapsulated, leaving no room for shaking.
- 4.Signs such as "Fragile" and "Handle with care" are prominently displayed on the outside of the package to remind handlers to pay attention to the operation.
- 5.After completing the filling and fixing, encapsulate the outer packaging material.
