Routine Maintenance of Switch Brake Lights:

- 1.Regularly check the working condition of the brake light switch, which can be judged by observing whether the brake light lights up normally when the brake pedal is pressed and goes out promptly when the pedal is released.
- 2.Keep the brake light switch clean to prevent dirt and other impurities from getting inside the switch and affecting its performance.
- 3.Once the brake light switch is found to be malfunctioning, such as the brake light is always on, does not light up or flickers and other abnormalities, it should be repaired or replaced in time.
